

# Oak Hammock Takes Advantage of GRU and GRUCom Services

A retirement community dedicated to lifelong learning, fitness and health, Oak Hammock at the University of Florida has taken full advantage of GRU's customized service and support. Through the GRU Business Partner program, Oak Hammock has received advice on everything from rate structure to environmental concerns. Oak Hammock also offers its residents advanced technology like high-speed Internet provided by GRUCom.

A GRU Business Partner since May 2004, Oak Hammock saves approximately \$1,400 monthly. According to Roger Mueggenberg, interim director of environmental services, Oak Hammock benefits from the partnership in more ways than one.

"The Commercial Energy and Water Surveys helped us outline a preventative maintenance program to ensure optimum efficiency of equipment," said Mueggenburg. "We also scanned a couple of our main electrical distribution

panels using GRU's infrared scanning service and, as a result, have replaced circuit breakers that were overheating and causing intermittent failures.

Also a GRUCom customer, Oak Hammock offers its residents an innovative approach to retirement living. GRUCom's Gator.Net high speed Internet service is available in all residences and assisted living units as well as the community's business/computer center. Whether researching topics for classes at UF or staying connected to family and friends, Oak Hammock's residents are taking full advantage of today's technology.

"GRUCom's high-speed Internet service gives our residents quick access to important information such as financial and email communications," said Brian Macke, Director of Information Technology at Oak Hammock. "Our residents enjoy the advantages of computers, which serve as communication and educational tools, with the added bonus of high-speed Internet."
