UNDER-SINK GREASE TRAP MAINTENANCE FORM

GRU requires the grease trap to be cleaned or pumped out at least twice/month. Failure to maintain the grease trap or to complete and submit the form to GRU may result in fines being assessed, mandatory monthly pump out by a grease hauling contractor or mandatory installation of an in-ground grease interceptor.

I certify that all information below is correct, that all the wastewater was removed from the grease trap and that the wastewater was disposed of properly (as solid waste or hauled off-site by a licensed waste hauler) and was not returned to any part of the sanitary sewer system.

Email picture of the sheet each time you clean to FOG@gru.com.
